

# Anes-Q

The easiest way to find out  
the Epidural Space

Do as you do.  
Just combine feeling and seeing.

It is not easy to find out where the epidural space is.  
But we can see and feel when we get there.  
You have concentrated only the pressure on your finger.  
Now you are feeling and seeing for sure.

We suggest you feel and see together.  
With the small difference, the result will be better.

# Anes-Q

## HOW TO USE

1. Check appearance

2. Execute manual leakage test

3. Inflate balloon with air or saline

4. Advance the needle until the balloon deflates

5. Inject solution

6. Remove the device
